

KEHAN QI

Mail: kehan.qi@stonybrook.edu

EDUCATION

Stony Brook University

Biomedical Informatics

PhD Student

Aug 25 2025 - present

- **Research Team:** Led by Professor Chao Chen. [homepage]
- **MR Image Reconstruction:** Propose a topology-based MR image reconstruction method and validate on open datasets.
- **OCTA Image Translation:** Propose a deep learning method for translating OCT volume to OCTA.

University of Chinese Academy of Sciences

Master of Engineering in Computer Technology

Graduate Study

Sept 01 2018 - June 26 2021

- **Research Team:** Led by Professor Shanshan Wang [homepage]
- **Brain Stroke Segmentation in MR Images:** Employ neural networks to segment brain stroke in MR images. Produced papers: 1 MICCAI as 1st author, 1 MICCAI as 3rd author, 1 IEEE Access as 3rd author.
- **MR Image Reconstruction and Segmentation:** Utilize a two-module neural network and re-weighted loss to segment and reconstruct MR images simultaneously. Produced papers: a pre-print paper as 1st author.
- **Reconstructed MR Image Quality Assessment:** Employ a neural network to assess MR image quality. Produced papers and patents: a pre-print paper as 1st author, a US patent as 3rd author.

Zhejiang University

Bachelor of Engineering in Measurement Control Technology and Instruments

Undergraduate Student

Sept 01 2013 - July 15 2017

SELECTED PROJECTS

LLM-based Scientific Review Assistant

Project Lead – System Design and Implementation

Personal Project (in progress)

May 2025 – Present

- **Objective:** Develop a practical LLM-based assistant for automating scientific paper review using open-source models with SFT and RAG.
- **Current Progress:** Completed problem definition, PRD writing, system architecture design, and technical research on model capability and deployment feasibility.
- **Planned Scope:** Lead engineering aspects including SageMaker-based inference, fallback logic, A/B testing, prompt version control, model retraining automation, and end-to-end monitoring.
- **Tools (Planned):** LangChain, FastAPI, AWS SageMaker, Lambda, CloudWatch, Angular, GitHub Actions, AWS CDK.

WORK EXPERIENCE

Stori

Data Engineer

Full-time Employee, Hangzhou, China

Apr 20 2023 - July 31 2024

- **Low-latency ML Inference System for Risk Control:** Designed and deployed a real-time ML inference system for transaction-level risk control. Used AWS DMS + Flink + Kinesis + Lambda + SageMaker for cross-account model invocation with 1-second average latency. Optimized inference pipeline for throughput and latency.
- **Real-time Data Infrastructure:** Built real-time data pipelines supporting ML model invocation, data monitoring, and downstream query API integration using Flink, Kinesis, Lambda, DynamoDB, and Elasticsearch. Served as backend for real-time financial indicators and risk flag triggering.
- **Team Leadership and Standards:** Established internal coding and deployment standards, CI/CD pipeline, and AWS CDK infrastructure templates. Mentored two junior engineers and led weekly sprint planning and code reviews.

Amazon

Software Development Engineer

Full-time Employee, Beijing, China

Aug 02 2021 - Feb 10 2023

- **Applied ML System Engineering:** Designed and implemented an automated pipeline for weekly product classification updates using ML models deployed on AWS SageMaker. Integrated Lambda, SNS, S3, and DynamoDB to support scalable, production-level ML inference and ingestion with tens of millions of products.
- **Impact Analysis via Distributed Processing:** Built large-scale PySpark pipelines to evaluate financial impacts of updated classification models. Analyzed billions of records to compute fee deltas pre- and post-deployment across multiple dimensions (product, seller, category). Applied Spark job optimization (e.g., executor tuning, broadcast disabling, RDD reuse) to reduce runtime to within 20 minutes.
- **Future Fee Prediction System:** Developed inference-based fee projection system utilizing classification results. Performed batch processing on 1.5B+ records with AWS Glue and Redshift, and optimized TPS throttling to support SageMaker-based fee computation. Enabled daily updates within a 24-hour SLA.

Tencent

Research Intern

Intern, Shenzhen, China

June 18 2020 - Sept 04 2020

- **Main Responsibility:** Develop new methods for medical image processing.
- **Project registered medical image quality analysis:** a) Detect landmarks from registered CT images. b) Train a neural network to predict registered image quality score, with landmarks and registered image as input. c) A Chinese patent produced.

SKILLS

- **Data Processing Techniques:** Spark, Flink, Hive, MySQL, No-SQL
- **Amazon Web Service (AWS) Skills:** Glue, Elastic Map Reduce (EMR), Lambda Function, Message Queueing Service (SQS), Managed Service for Apache Flink, Application Programming Interface (API) Gateway, Virtual Private Cloud (VPC), Database Migration Service (DMS), Simple Storage Service (S3), SageMaker
- **Deep Learning Techniques:** SFT, LoRA, RLHF, RAG
